

Web Developer Professional Work-Study

Fundamentals of CSS, CSS Pre-Processors, Frameworks, and Version Control Systems

Team Project - Final Project due date and time: Sep 30, 2022 (Friday), 11:59 pm

[] – Total of Team Members: 3

[] – Your project will be using SCSS.

[] – Sanitize your SCSS.

[] – Use semantic HTML.

[] – Include The Title of your page.

[] – Create a responsive web page in teams and using **Git and GitHub**.

[] – Home page should be a summary from the other pages. The page should have at least 4 sections in the main content.

[] – Mobile and Tablet version present hamburger menu.

[] – **Every page will have at least 5 sections.** I suggest you to be creative to build your sections.
Avoid repetitive design.

[] – Every student has to build his/her own page and. In other words, despite the home page, there are 3 more pages.

[] – Every student must provide **at least 5 commits**. You can separate your commits by section.

[] – Your website main topic should provide different contents or sub topic to a single page.

[] – Copy and paste with no reference will not be accepted. Please, provide your references. You may create a section only to provide references of your research.

[] – Your colors should match harmonic. Avoid mixing “fuchsia” with “yellow”, or “red” with “blue”.

[] – Use anchor tags to your navigate your page. When the menu is clicked, the user should be redirect to that section.

[] – You should use Google Fonts to apply styling fonts

[] – You should use Google or Font awesome icons
